SUMMARY

Computer Science graduate skilled in SQL, Python, and machine learning, with hands-on experience turning raw data into insights people can act on. Built a credit-risk model on an 8,000-record dataset that identified 74% of defaulters (AUC 0.83) and delivered a stakeholder report with clear recommendations. Comfortable writing SQL queries, building ETL pipelines, designing databases, and communicating findings to non-technical audiences. Seeking entry-level Data Analyst and Data Scientist roles.

EDUCATION

Bachelor of Science in Computer Science May 2026

New Jersey City University, Jersey City, NJ GPA: 3.17 / 4.0

Relevant Coursework: Artificial Intelligence, Data Structures & Algorithms, Database Systems, Software Engineering I & II, Discrete Structures, Operating Systems, Computer Architecture, Computer Security

TECHNICAL SKILLS

Languages & Querying SQL, Python, JavaScript, C

Data & Analytics Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Jupyter Notebook, Excel

Statistics & Modeling Hypothesis testing, statistical modeling, classification, feature engineering, exploratory data analysis, model evaluation

Databases & ETL SQLite, MongoDB, schema design, ETL pipelines, data cleaning & validation

Reporting & Visualization Dashboards, stakeholder reports, data storytelling, Power BI (in progress)

Tools Git, GitHub, VS Code, Linux, Flask, REST APIs, JSON

PROJECTS

Data Analyst - Academic Project (Credit Risk) *Associated with New Jersey City University | Python, SQL, Pandas, Scikit-learn*
Dec 2025 - May 2026

- Built and compared Logistic Regression and Random Forest classifiers on an 8,000-record loan dataset to predict default, handling class imbalance with balanced class weights.
- Performed EDA identifying debt-to-income ratio, income, and interest rate as the strongest default drivers, with the highest debt-to-income band defaulting at 41.6% versus 3.3% for the lowest.
- Evaluated models on recall and ROC-AUC rather than accuracy, selecting the model that caught 74% of defaulters (recall 0.74, AUC 0.83), and produced a stakeholder report with underwriting recommendations.

Student Grade Management System *Python, SQLite, CSV* 2024

- Designed a normalized SQLite schema with data-integrity constraints and built a full ETL pipeline to extract, validate, and transform CSV records into structured tables.
- Automated report export, cutting report generation from a repetitive manual task to a single command.

Smart Course Planner Web App *Python, Flask, MongoDB* 2025

- Designed a NoSQL data model in MongoDB across a 50+ course catalog and implemented topological sorting to validate dependency graphs.
- Developed 5+ RESTful Flask API endpoints to serve structured data to the frontend.

Movie Search & Analytics App *JavaScript, TMDB API, REST* 2024

- Integrated the TMDB REST API to ingest, parse, and transform JSON from a catalog of 500,000+ records, with search, filter, and aggregation over large datasets.
