SUMMARY

Computer Science graduate (New Jersey City University, May 2026) with hands-on project experience in Python, SQL, and machine learning. Skilled in building ETL pipelines, designing relational and NoSQL databases, and developing data-driven applications using Pandas, Scikit-learn, and Matplotlib. Seeking entry-level Data Analyst and Data Science roles where I can apply strong analytical and problem-solving skills.

EDUCATION

Bachelor of Science in Computer Science

New Jersey City University, Jersey City, NJ

May 2026

GPA: 3.2 / 4.0

Relevant Coursework: Artificial Intelligence, Data Structures & Algorithms, Database Systems, Software Engineering I & II, Discrete Structures, Operating Systems, Computer Architecture, Computer Security

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, C

Data & Analytics: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Jupyter Notebook

Databases: SQLite, MongoDB, schema design, relational & NoSQL databases

Frameworks & APIs: Flask, REST APIs, JSON

Tools: Git, GitHub, VS Code, Linux

AREAS OF INTEREST

Machine Learning | Predictive Analytics | Data Visualization | Statistical Modeling | Natural Language Processing | Business Intelligence | AI Applications

PROJECTS

Credit Risk / Loan Default Prediction | *Python, Pandas, Scikit-learn*

2026

- Built and compared Logistic Regression and Random Forest classifiers on an 8,000-record loan dataset to predict default, handling class imbalance with balanced class weights.
- Performed EDA identifying debt-to-income ratio, income, and interest rate as the strongest default drivers; the highest debt-to-income band defaulted at 41.6% vs 3.3% for the lowest.
- Evaluated models on recall and ROC-AUC rather than accuracy; selected the model that caught 74% of defaulters (recall 0.74, AUC 0.83) and produced a stakeholder report with underwriting recommendations.

Student Grade Management System | *Python, SQLite, CSV*

Fall 2024

- Designed a normalized SQLite database schema to manage records for 100+ students, applying data integrity constraints to eliminate redundancy.
- Built a full ETL pipeline to extract raw CSV inputs, validate and transform records with exception handling, and load clean data into structured tables.
- Automated CSV export to convert database records into shareable reports, removing repetitive manual data extraction.

Smart Course Planner Web App | *Python, Flask, MongoDB*

Spring 2025

- Designed a NoSQL data model in MongoDB to represent course prerequisites and student schedules across a 50+ course catalog.
- Implemented a topological sorting algorithm to validate course dependency graphs and prevent invalid schedule submissions.
- Developed 5+ RESTful API endpoints using Flask to serve structured academic data to the frontend.

Movie Search & Analytics App | *JavaScript, TMDB API, REST*

Fall 2024

- Integrated the TMDB REST API to ingest, parse, and transform JSON data from a catalog of 500,000+ movie records.
- Built search, filter, and aggregation features enabling real-time exploration of large datasets.
- Implemented async/await for non-blocking data fetching with graceful error handling for reliable retrieval.

CERTIFICATIONS

- The Ultimate Job Ready Data Science Course — CodeWithHarry (2026)
- Data Structures & Algorithms — Apna College (2023)
